

JGR Optics Inc. Introduces New PT1 – Polarity Tester

Ottawa, Ontario, July 9, 2019 – JGR Optics Inc. announced today the availability of the new PT1 – Polarity Tester. The PT1 is an easy-to-use polarity tester with a touchscreen interface to allow for one touch testing of typical pre-programmed type A, B, C, and endless configurable custom profiles.

The PT1 is ready to be equipped with up to 288 channels for even the most challenging configurations. Efficiently, the PT1 operates on a new stand-alone JGR platform which does not require a PC to operate. There is still the possibility of remote operation through USB or Ethernet.

“With the increasing complexity and fiber counts of cable assemblies, polarity testing has become a critical step in the testing process. JGR has been working hard to make this step of the process effortless, reliable, and efficient,” said Mark Berezny, Senior Product Line Manager at JGR Optics Inc.

The PT1 will be on full display at booth 13-44 at the Fiber Optics Expo at Tokyo Big Sight.

JGR is always looking for ways to make customers more efficient in order to save time and money. The PT1 was developed with customers in mind by looking at the growing demand to reduce testing time and to increase throughput with a user-friendly experience. The PT1 is the first of a collection of test equipment to be released by JGR; not only meeting and exceeding current demands, but preparing for the future of testing through full automation.
