

## JGR Optics Announces Availability of the New OB1 – Variable Backreflector

Ottawa, Ontario, June 30, 2021 – JGR Optics Inc. announced today the new OB1 – Variable Backreflector. The OB1 is built off of the same reliable & repeatable design as the OA1 optical attenuator. The OB1 takes advantage of some of the new features which are common amongst JGR's new products, such as the 5" touch screen & Ethernet/USB communication.

The OB1 is ideal for lab and production applications including transceiver testing, QA testing, laser production and automated test systems.

The OB1 variable backreflector offers +/- 0.02dB repeatability and a range of 60dB in single-mode and 35 dB in multimode. The OB1 can be controlled via the front panel touch screen, or remotely via USB & Ethernet.

The OB1 series variable backreflectors operate from 1200-1700 for singlemode and 750-1700 for multimode. A 50/50 coupler can be added to bypass the variable backreflector for input signal monitoring.
