JGR Optics Introduces New SX1 Rackmount Optical Switch

Ottawa, Ontario, March 13, 2018 – JGR Optics Inc. announced today the availability of the new SX1 Rackmount Optical Switch. The SX1 Optical switch can support multiple MEMs based single-mode or multimode switches in a single 1U unit. The SX1 low insertion loss, fast switching time and small size makes them one of the most effective switching solution for manufacturing on the market.

The SX1 Rackmount Optical Switch is also easily integrated into an automated manufacturing test system with its remote control capabilities via Ethernet or USB.

“Efficiency and flexibility are two key words in manufacturing today, no matter in which industry you are. With the SX1 Optical Switches, JGR brings precisely this to its customers.” said Mark Berezny, Senior Product Line Manager at JGR Optics.

About JGR Optics inc.

Since the introduction of the innovative, industry-leading, Backreflection Meter (BR5) and Multi-Output Backreflection Meter (MBR5), JGR has expanded their portfolio to include the widely used MS12001 Cable Assembly Test System, industry leading Benchtop (SX4) and Rackmount (SX8) Optical Switches, Optical Attenuators (OA5) and the Polarization Dependant Loss Meter (PDL5). Through recent development JGR now also offers an ultra-wide wavelength range Tunable Laser Source (TLS5), a complete Environmental Optical Test System (EOTS) and the Wideband Component Test System (WCS).

In addition to research, development, and production within the JGR facility in Ottawa, Canada, they operate an ISO 17025:2005 Accredited Laboratory for repair and NIST-traceable calibration services.
