

FOR IMMEDIATE RELEASE

JGR Optics Introduces New MS08B Benchtop Platform

Ottawa, Ontario, March 18, 2015 – JGR Optics Inc. announced today the availability of the new MS08B benchtop platform. The MS08B is an 8-slot platform designed to work with any external computer and compatible with JGR’s MS12001 Cable Assembly Test System.

With its 8-slot capacity, the MS08B will allow users to combine single-mode and multimode MS12 modules with large MS7 switches to test high channel count fibers and also add a second MS7 switch to perform polarity tests on those fibers.

The MS08B benchtop platform is compatible with all MS12 and MS7 modules.

The MS08B will be demonstrated at OFC 2015 in Los Angeles, USA from March 24 to 26, 2015 (Booth # 2031).

About JGR Optics inc.

JGR develops and manufactures high quality fiber optic instrumentation for the unique demands of test and measurement environments. Our current product offering includes SX Series Optical Switches, BR5 and MBR5 Backreflection Meters compliant with the new IEC 61240-4-1 Multimode Standard, PDL5 IL/RL/PDL Meter and the MS12001 Cable Assembly Test System. JGR Optics also provides support, on-site calibration, and repair under JGR NIST-traceable, ISO17025:2005 certification.
