## **JGR Optics introduces the MS4 Polarity Test Module**

Ottawa, Ontario, October 11, 2017 – JGR Optics inc. announced today the availability of the MS4 Polarity Test Module for its market leading MS12001 Cable Assembly Test System. The MS4 module is a simple, user-friendly test instrument specifically designed to check the polarity of multi-fiber trunk cables.

Each MS4 Polarity Test Module supports testing of up to 48 fiber single-mode and multimode ribbon cables and system capacity can be expanded up to 432 channels by adding additional modules.

“With the addition of the MS4 Polarity Test Module to the MS12001 Cable Assembly Test System, JGR is now able to offer a completely integrated solution to measure IL, RL and Polarity of high fiber count cables which are now commonly deployed in data centers. Customers no longer have to integrate multiple instruments and databases to do so” said Mark Berezny, Product Line Manager at JGR Optics.

### **About JGR Optics inc.**

Since the introduction of the innovative, industry-leading, Backreflection Meter (BR5) and Multi-Output Backreflection Meter (MBR5), JGR has expanded their portfolio to include the widely used MS12001 Cable Assembly Test System, and industry leading Benchtop (SX4) and Rackmount (SX8) Optical Switches. Through recent development JGR now also offers the newly introduced Optical Attenuators (OA5), Polarization Dependent Loss Meter (PDL5), an ultra-wide wavelength range Tunable Laser Source (TLS5) and a complete Environmental Optical Test System (EOTS).

In addition to research, development, and production within the JGR facility in Ottawa, Canada, they operate an ISO 17025:2005 Accredited Laboratory for repair and NIST-traceable calibration services.
