

JGR Optics Announces Availability of the New BR1 – Backreflection Meter

Ottawa, Ontario, September 9, 2020 – JGR Optics Inc. announced today the new BR1 – Backreflection meter. The BR1 is built off of the same bullet-proof optics as the legendary BR5. With improved electronics, the BR dynamic range is extended down to -85dB. The BR1 takes advantage of some of the new features which were introduced on the ground-breaking RL1, such as the 5” touch screen & Ethernet/USB communication.

The BR1 was designed with the BR5 user in mind. The BR1 uses OCWR technology to provide the simplest, most reliable, and most cost effective solution for cable assembly testing. The BR1 is compatible with the tried & true GMS software for simple & easy customized test automation. The BR1 is capable of being equipped with custom fiber core sizes such as 5u flexcore, 100u & 200u fiber and many others. Customized sources are also available upon request.

The most efficient cable assembly houses know that OCWR technology is the most flexible, reliable and cost effective solution for specific applications such as short component assemblies or customized, non-standard products. JGR has been the leader in OCWR backreflection test equipment over the past 15 years and has been refining the OCWR design ever since to provide the most stable & accurate backreflection measurements in the industry.

“The BR5 has been the most trusted & reliable backreflection meter over the last 15 years. We are proud to continue the BR5 legacy through the BR1 with its revamped, modern & intuitive user experience,” said Mark Berezny, Sr. Product Line Manager at JGR Optics Inc.

The BR1 will be on display at CIOE Sept 9-11 booth #6B23 alongside Senko Advanced Components. If you are unable to attend, please contact william.wong@senko.com to schedule a virtual demo.
